“But, it’s been published!”

Depositing your articles in Dominican Scholar

Just because you’ve published your article, doesn’t mean that you can’t deposit a version your scholarship in an institutional repository.

Michael Pujals, MLIS dominican.scholar@dominican.edu

When you publish an article, you’ll often sign a contract with the journal’s publisher that will let you know what you can and cannot do with your work after publication. That may include whether you can reuse it in the classroom, send it to colleagues, or post it in an institutional repository.

Publishers also recognize that your article may go through several versions on your way to publication:

1. The Author’s Pre-print
2. The Author’s Post-print
3. The Published Version

Publishers usually have rules on what you can do with each version and those rules vary from publisher to publisher.

The Author’s Pre-print

The pre-print is the version of the article that has yet to go through peer-review; it’s that final draft you’ll send to the journal to start the peer-review process.

Most journals will allow you to deposit the pre-print in a repository. There may be hesitation to deposit the pre-print because it hasn’t gone through the peer-review and

authors may be wary of posting research before publication.

It is becoming more common to post the pre-print in to speed up communication and research in a given field. This is most common in physics and mathematics and it’s becoming more common in biology and chemistry.

The Author’s Post-print

The post-print (aka the author’s accepted manuscript) is the version article after the article has gone through peer-review; it’s the final draft, ready for publication.

Publishers will often allow you to deposit this version in an institutional repository. You may be able make it immediately available or you may have to have a delayed release before it’s publicly accessible, depending on the publisher’s policies.

Hold on to your post-prints (get a copy from the first author on your paper if it’s not you).

The Published Version

The published version of the article is final version after peer-review that has been

formatted by the publisher and appears in the journal.

Most publishers won't allow you to post this version of the article.

Creative Commons Licenses

Some articles are published under a Creative Commons (CC) license. CC licensing allows you to share your work in a less restrictive way than traditional copyright. If a journal offers CC licensing, it means that you can post the published version the article in a repository.

How Do You Know What You Can Do?

Depending on the journal, you might sign over many of your rights as an author with limitations on how you can use your article; this information should be in the author agreement. You can usually find these rules on a journal's website.

You might consider trying to alter your contract with the publisher so that you retain some of your author rights.

Be sure to read your author agreements; they stipulate how you can use your article, or versions of your article, once it's been published. Keep a copy of your agreements so that you can refer back to them later.

When You Publish

1. Keep a copy of the post-print (AKA the author's accepted manuscript) and send a copy to the University's Scholarly Communications Librarian
2. Negotiate with the publisher to retain your rights
3. Keep a copy of your author agreement

Resources

SPARC Author Addendum

Use the Author Addendum from SPARC to retain some of your author rights. Download and fill out the addendum and attach it to your contract. Include it as part of the contract negotiation process; the worst that can happen is that the publisher says "No."
