CBS, Washington Post cite research by political scientist

Dominican University of California political scientist Alison Howard and colleague Donna Hoffman, an associate professor of political science at the University of Northern Iowa, have released new data examining how many of the legislative requests President Obama made in his 2014 State of Union Address were adopted by Congress.

CBS radio, [Columbia Journalism Review](#), [FiveThirtyEight](#), [Politico](#), [The Washington Post](#), and [The Washington Times](#) were among the media outlets covering State of the Union research by Howard and Hoffman before and after President Barack Obama's State of the Union Address on January 20.

Hoffman and Howard, chair of [Dominican's Department of Political Science and International Studies](#), [developed a tool](#) to assess a president's success by calculating how many of the legislative requests presidents make of Congress in their State of Union Address get adopted in the next session. Modern presidents (presidents since 1965) include specific calls for Congressional action in their State of the Union Address, with a median of 31 requests per address. President Clinton holds the record for most requests - 87 requests in 2000.

President Obama's median full and partial request success rate was about 45 percent during his first term - practically identical to Ronald Reagan's full terms in office and slightly above the median yearly rate of 43 percent. However, he has seen his success rate decline since the Republicans took control of the House in 2011. In 2012, his full and partial success rate was 21.4%. In 2013 only two of his legislative requests were enacted by Congress for a success rate of 4.9%. In 2014 he fared slightly better, with 13.8% of requests fully successful and 17.2% of requests either fully or partially successful.

Howard and Hoffman have spent the past decade studying how presidents use the State of the Union Address to communicate with the public and request legislation of Congress.

In their book [Addressing the State of the Union](#), Hoffman and Howard explored how and why the State of the Union Address came to be a key tool in the exercise of presidential power. They outline ways presidents use it to gain attention, to communicate with target audiences, and to make specific policy proposals.

In their 2012 paper "Obama in Word and Deeds," which appeared in *Social Science Quarterly*, Hoffman and Howard examined how President Barack Obama used the State of the Union Address during his first term, noting both differences and similarities between Obama and his predecessors.

Howard notes that Obama's rhetorical choices in the State of the Union Address portray him as an unusual chief legislator in many ways. He is deferential to Congress on legislative detail, tending to focus his SUA requests on large-scale items and leaving the details of legislation to Congress. His use of symbolic rhetoric also is unique.

"President Obama uses individuals and historical examples to highlight the instrumental and effective role government has played in supporting the pursuit of the American dream," Howard said. "He offers recognizable examples that match his vision of the role of government in order to persuade Congress and the public that his agenda is one that should be enacted."

While Ronald Reagan began the process of incorporating key individuals into his State of the Union Address in 1982, all were representations of what he called American heroes, Howard said. George Bush continued Reagan's practice of recognizing key people, and Bill Clinton used guests as symbols of the policy successes for which he claimed credit. He also introduced AmeriCorp participants as a way of touting the program as a success while making the case that Congress should not cut the program.

“President Obama’s SUAs are qualitatively different; given his own background, and the economic recession and weak recovery that have dominated his tenure, the individuals he utilizes for symbolic purpose all typify some element of the American dream.”

The most recent State of the Union Address could give insight into how Obama would like his presidency to be remembered, as second term presidents typically focus on their “legacy” during their remaining time in office. For example, both Ronald Reagan and Bill Clinton concentrated on foreign policy during their second term. Howard believes Obama’s policy rhetoric during his second term will be similar to his first term.
