Teacher Perspectives on Student Behavior and ACEs (Adverse Childhood Experiences)

Bridget Mudd
Relevant Terms

- **Psychological Trauma**—“Traumatization occurs when both internal and external resources are inadequate to cope with external threat” (Van der Kolk, 1989, para 8)

- **Trauma Response**—A variety of reactions are often reported and/or observed after trauma. Most survivors exhibit immediate reactions, yet these typically resolve without severe long-term consequences. ... These reactions are often normal responses to trauma but can still be distressing to experience” (www.ncbi.nlm.nih.gov, n.d.)

- **ACEs**-Adverse Childhood Experiences
  - Common ACEs include: food and housing insecurity, Divorce, parental mental illness or substance abuse, physical, sexual or emotional abuse, death of a parent
  - Not every ACE leads to a trauma response
## Context (Literature Review)

Emergence of Trauma Theory
AKA Trauma Makes People Uncomfortable

Ridiculously Ancient History

- Ancient Sumerian Medical Texts 1300-609 BCE
- Herodotus and Thucidides (Ancient Greek Historians) 440-404 BCE
- Sophocles, Greek Tragedies (Freud is a fan) 441 BCE
- Immediately following every single war, then promptly set aside

1970 to 1995

- The Vietnam War and the Women’s Movement
- Notable Names: Bessel van der Kolk and Sandra Bloom
- Clinicians and researchers begin to comprehend how many people are impacted by childhood trauma

#metoo #stopsoldiersuicide
The ACEs Study
AKA People require a mountain of evidence to accept prevalence of trauma

First Wave

– Dr. Felitti stumbles on high rate of incident during an obesity clinic
– Teams up with Dr. Robert Anda and others for 17,000+ study through Kaiser Permanente
– 40% of sample experienced 2 or more ACEs
– 12.5% of experienced 4 or more
– 20% of sample experienced childhood sexual abuse
– 4 or more ACEs linked to increased risk for heart attack, stroke, STIs, and early death

Later studies under the ACEs Umbrella Link ACEs and

– Alcohol and substance abuse
– Cancer
– Suicide
– Incarceration
– Intimate partner violence
– Adult sexual victimization
– ADHD diagnosis
– Lower academic achievement
– Higher risk for Dropping out of school
– More premature death
Rainbow Butterfly Unicorn Kitten is here to help when you spend a year and a half studying the insane prevalence of childhood trauma and ways our education system fails to address the needs of students who are affected by it.
Trauma-Informed Practices
AKA Actually, trauma still makes people uncomfortable

Roger Fallot and Maxine Harris

- Universal screening for trauma in mental health treatment facilities and programs
- Training all staff, not just clinicians
- Review existing for anything that might harm trauma survivors

Many Other Researchers Suggest Other Systems Should be Trauma-Informed

- The Juvenile Justice System
- Foster Care
- Hospitals
- Prisons
- Schools
No one asked teachers what they thought. Okay, 2 people did. Once in 1993 and again in 2010
My Research

What do teachers think about trauma-informed practices in elementary schools?

- Do teachers know how common ACEs are?
- Do teachers perceive those rates of prevalence in their classrooms?
- Do teachers see a connection between student behavior and ACEs?
Methods:
41 teachers at 3 school sites in 3 counties. Survey + Qualitative Interviews

<table>
<thead>
<tr>
<th>Affluent Public Elementary</th>
<th>Urban Public Elementary</th>
<th>Private Urban Elementary</th>
</tr>
</thead>
<tbody>
<tr>
<td>15 teachers completed the survey</td>
<td>17 teachers completed the survey</td>
<td>8 teachers completed the survey</td>
</tr>
<tr>
<td>3 teachers interviewed</td>
<td>3 teachers interviewed</td>
<td>1 teacher interviewed</td>
</tr>
</tbody>
</table>
Findings

- Teachers internalize concepts pushed by administration.
- Teachers rarely underestimated national rates of prevalence of ACEs.
- Teachers' estimates of ACEs reflected the national rates for some ACEs.
- Teachers at all three schools estimated zero of their students have experienced sexual abuse despite it being one of the most common ACEs.
Teachers internalize trainings their administration emphasizes (multiple sessions)

Affluent Public Elementary
- Teachers often referred to Zones of Regulation and related terms both generally and as solutions to challenging behavior
- Teachers did NOT refer to Academic Rigor

Urban Public Elementary
- Teachers similarly enthusiastically referred to Academic Rigor
- Teachers did NOT refer to Zones of Regulation
**Teacher ACEs directly correlated perfectly with estimates of children in class who may be impacted by trauma.**

Teacup Pig Eats an Ice Cream Cone at a Tiny Picnic Table!

You’re doing a great job. We’re almost done!
Implications

- Engaging, multiple-session teacher trainings work.
- If we provide teachers with trauma informed training, they will become trauma-informed teachers.
- Universally applied trauma informed practices that benefit ALL students
- Trauma-informed teaching has elements in common with programs and philosophies many districts already utilize such as mindfulness, GLAD, Zones of Regulation, Responsive Classroom

Resilience and Protective Factors

Human brains have amazing neuroplasticity. Studies show that resilience is the anecdote for ACEs. Children with protective factors are half as likely to experience some of the
